Please amend the claims as follows:

1.   (Currently Amended) A method for granting access to a computer network, said method comprising:

receiving a request for access to the computer network from a client terminal;

determining whether a mobile terminal providing a time varying password is within a predetermined location, said mobile terminal being separate from the client terminal;

requesting a [cellular phone] wireless network to determine the location of the mobile terminal providing the time varying password using a global positioning system;

granting access to the computer network, if the [computer] mobile terminal is within the predetermined location, and if the time varying password provided by the mobile terminal is received within a particular time interval from the client terminal; and

otherwise denying access to the computer network.

Claims 2-5 are cancelled without prejudice.

6. (Previously Presented) The method of claim 1, wherein determining the location of the mobile terminal providing the time varying password further comprises:

determining the location of the mobile terminal based on the received password, wherein the time varying password is indicative of the location of the mobile terminal.

7.   (Currently Amended) An article of manufacture comprising a computer readable medium, said computer readable medium storing a plurality of executable instructions, said executable instructions for:

receiving a request for access to the computer network [receiving a request or initiating communication for access to the computer network;] from a client terminal;

determining, at least in part, whether a mobile terminal that provides a time varying password is within a predetermined location, said mobile terminal being separate from the client terminal;

requesting a [cellular phone communication network] wireless network to determine the location of the mobile terminal providing the time varying password using a global positioning system;

granting access to the computer network, if the [computer] mobile terminal is within the predetermined location, and if the time varying password is received from the client terminal within a predetermined time interval; and

otherwise denying access to the computer network

Claims 8-12 are now cancelled without prejudice.

13. (Previously Presented) The article of manufacture of claim 7, wherein determining the location of the mobile terminal further comprises:

determining the location of the mobile terminal based on the received time varying password, wherein the time varying password is indicative of the location of the mobile terminal.

Claim 14 and 15 are now cancelled without prejudice.

16. (Previously Presented) A communication system for granting access to a computer network, said communication network comprising:

a server for receiving a request for access to the computer network from a client terminal;

a wireless network for determining at least in part a location of a mobile terminal, said mobile terminal providing a time varying password and being separate from the client terminal, wherein said wireless network further comprises a global positioning system; and

wherein the server granting access to the computer network is dependent on the location of the mobile terminal.

17. (Original) The communication system of claim 16, wherein the server grants access to the computer network if the mobile terminal is within a particular location and wherein the server denies access to the computer network if the mobile terminal is outside the particular location.

Claims 18-22 are now cancelled without prejudice.

Please add the following claims:

--23. (New) The article of manufacture of claim 7, wherein the client terminal receives the time varying password from a keyboard.

24. (New) The article of manufacture of claim 23, wherein the mobile terminal comprises a cellular telephone.--
